Manipulating Images and Screen Shots: Rotating Your Image

- In this tutorial you will learn how to rotate your image.
- Rotating your image allows you to rotate your image so that it can appear in a new rotation. This might be helpful if your image appears sideways or upside down.

Rotating Your Image

For this tutorial, the image used is a screen shot of the MyWalden University Portal login page.

Step 1: You can rotate your image by using your mouse to click on it. A light blue outline should appear around it. At the top of the outline there is a green circle. When you hover over the green circle you will see a circular arrow. Click this area.

![Image](image.png)

The circular arrow will allow you to rotate your image.

Step 2: While holding the mouse button down, rotate your image by moving your mouse.

Finish: When your image rotated how you want it, release the mouse button. Your image is now rotated.
